

# Armstrong Conservation District

Working with our partners to deliver Conservation  
Programs

# Recent partnering projects of the District/ Armstrong Trails and the Conservancy

- Agricultural Best Management Practices with local producers
- Armsdale Agricultural and Conservation Service Center
- Non-Point Source Pollution Control efforts along the Armstrong Trail
- Tree Planting and Erosion Control efforts on Conservancy properties
- Habitat enhancement efforts of the District developed in conjunction with the Trails and Conservancy

# Photos of Recent ACD/AT/ and AC Projects

Working in partnership to improve our environment

# ACD/AT/AC projects

## Huling Run-AMD Passive Wetland Treatment System

## Future home of the Armsdale Agricultural and Conservation Service Center

## AC Property-Mc Candless before Reclamation

## Mc Candless Property- Armstrong Conservancy

Reclamation of 11 acres of abandoned mine lands and construction of a passive wetland treatment system to address non-point source pollution from this site. Funding received from the Commonwealth of Pa.

The Mc Candless property is roughly 292 acres in size and provides a view shed along both Redbank Creek and the Allegheny River of over one mile

## Armstrong Trail

The Armstrong trail is a 36 mile rails to trails project developed jointly by the Armstrong Conservancy/Armstrong Trails and the Conservation District. The Conservancy provided initial funds for the acquisition of the property while the Trails organization develops and maintains the Trail. The Conservation District provides technical assistance to solve non-point source pollution problems along the trail corridor.

# Armstrong Trails and Armstrong Conservation District

Erosion Problem- Armstrong trail

Erosion problem- what we normally deal with around here

## Other Trail Projects of the District

- Great Shamokin Path- a 4 mile rails to trails Project linking the communities of Yatesboro, Rural Valley and NuMine designed, built and maintained in cooperation with the Cowanshannock Creek Watershed Association.
- Roaring Run and Rock Furnace Trails-a 6 mile rails to trails project designed, built, and maintained in cooperation with the Roaring Run Watershed Association
- Redbank Trail- a 41 mile rails to trails project designed, built and maintained in cooperation with the Redbank Valley Trails Association
- Sligo Branch Trail- a 10 mile rails to trails project designed , built, and maintained in cooperation with the Redbank Valley Trails Association
- Kiski River Trail- a 23 mile water/ rails to trails project currently being designed and having water access points constructed in cooperation with several municipalities and the Kiski Watershed Association. The rails to trails component of the project is currently in the “acquisition phase”
- Armstrong Trail extension- an 11 mile proposed extension of the Armstrong Trail is currently in the “acquisition phase”

## Natural Stream Design Project in an Urban Watershed Developed with the Conservancy

# Always working to Gather Technical Information for the District!

It always pays to know where you are and that your Board knows that you are hard at work.

You never know who you might meet along the Trail of life! Or where your next stay takes you!

Take time to sample the local cuisine and stop by  
and visit old friends when you're not too busy

## Assessing wildlife habitat in Mexico
